

PHP FINAL PROJECT

You are to create a Hospital Management System for Ghana Health Service (GES). The system should be able to perform these functions:

1. Retrieve all patients' records in a table form.
2. Add new patient.

Note: Create a database called **hospital** and a table **patient**. The table must have these columns; **no**, **patient_id**, **name**, **age**, **number**, **diagnosis**, **date_admitted**. You need to compress your project folder into a zip form before submitting it. Submit your project through this email:

bismarko@aiti-kace.com.gh

Deadline 10/06/2022

Good luck!
